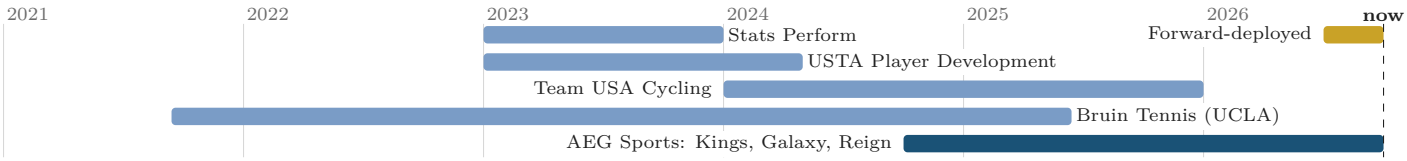
Data engineer for the **LA Kings, LA Galaxy and Ontario Reign**. In sports data since 2021, from college tennis to pro teams. I build with Claude Code and Codex agents every day.



LA Kings, LA Galaxy, Ontario Reign AEG Sports Oct 2024 – now

Data Engineer data engineering, internal apps, AI workflow Los Angeles

Own LA Galaxy's data platform and the commissions system for all three teams. I also review the shared Kings and Reign pipelines, and ran all three teams alone after our senior engineer left in May 2026.

Stack Databricks, Spark, Delta Lake, Unity Catalog, Azure, Fivetran, Next.js, Salesforce Marketing Cloud, Dynamics 365

- **Shield (lead engineer).** Internal reporting app that replaced scattered Power BI for Kings and Galaxy leadership. Shipped to production in Sep 2026 on Next.js, Azure and Databricks Genie. Demo
- **Commissions (own end to end).** The system that pays sales reps across all three teams. I migrated it from Synapse to a Databricks medallion pipeline of about 2.1M rows and caught a $16K historical overpayment.
- **Galaxy fan and sales data.** Feed 580K fans into Salesforce Marketing Cloud, recovered 2,384 missed unsubscribes, restored the Dynamics CRM sync and route new web leads to reps.
- **Reliability and cost.** Data quality checks that stop bad loads, ticketing loads that wait for source data, CI/CD deploys with Azure DevOps and Databricks Asset Bundles, and retired legacy pipelines saving about $31K a year.
- **AI knowledge base.** Pipeline docs, priorities and meeting notes in one AI-readable place that our analysts and engineers query with Claude and Codex.

Sports Analytics 2021 – now

Bruin Tennis Consulting founder, UCLA men's tennis analytics 2021 – 2025

- Started on one shared Dartfish account with no funding or coach buy-in. Recruited and trained about 80 students and built our own tagging site, video pipeline and D3 match visuals. The team reached the 2025 NCAA quarterfinals. Demo

Stats Perform AI data scientist 2023

- Built Stats Perform's first AI tennis radio, which turns Opta point data into GPT-4 commentary read by a synthetic voice, demoed on Australian Open footage. Also worked with live betting feeds. Demo

USTA Player Development data analyst 2023 – 2024

- Coaching analyst for top US players including Coco Gauff and Ben Shelton at summer events and the US Open. Used Hawk-Eye ball and player tracking for match prep. Demo

Team USA Cycling data analyst, freelance 2024 – 2025

- Built Tableau dashboards from training splits that coaches used to pick sprint riders and plan training. Demo

Forward-deployed data and AI work for LA brands I like Jul 2026 – now

- **Toroline** tennis strings. Market intelligence site and Claude workflow on scraped retail, lab test and creator data. Demo
- **MARKET** Chinatown Market streetwear, 4 people. Helped set up their Claude-run reporting pipeline that pulls Shopify, Brandboom, Klaviyo and Instagram into DuckDB with stale data warnings. Demo
- **Giant Robot** art store and gallery. Scoping AI tools that find artists for shows from Instagram and draft the 350 listings staff now build by hand per show.

Data Python, SQL, PySpark, pandas, Databricks (Lakeflow, Jobs, Asset Bundles), medallion architecture, dimensional modeling, data quality checks, Data Factory, Synapse, Azure SQL, Blob Storage, ingestion (Fivetran, SFTP, REST APIs), DuckDB
AI Claude Code, Codex, Cursor, MCP, GPT-4 API, text-to-SQL (Genie), AWS Polly **Viz** D3.js, Tableau, Power BI **Apps** TypeScript, Next.js/React, Vercel, Git, CI/CD
Systems Dynamics 365, Salesforce Marketing Cloud, Shopify, Klaviyo, Azure DevOps, Jira, Confluence, webhooks, AWS S3
Education UCLA, B.S. Data Theory, 2025 **Languages** English, Mandarin
