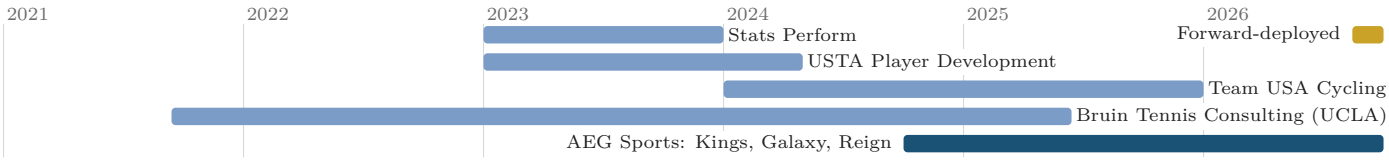
Data engineer for the **LA Kings, LA Galaxy and Ontario Reign**. In sports data since 2021, from college tennis to pro teams. I build with Claude Code and Codex agents every day.



LA Kings, LA Galaxy, Ontario Reign AEG Sports Oct 2024 – now

Data Engineer Databricks on Azure, three teams Los Angeles

Briefly the only data engineer for all three teams after our senior engineer left in May 2026. 122 pull requests merged Jan–Jul 2026.

- **Internal reporting app.** Co-built *Shield*, which replaces scattered Power BI for Kings and Galaxy leadership; shipped to production Sep 2026 (Next.js on Azure App Service, Databricks Genie Q&A). 261 of its 319 commits are mine (demo).
- **Commissions.** Migrated sales commissions for all three teams from Synapse to Databricks bronze/silver/gold (∼2.1M rows) and traced a ∼$16K historical overpayment.
- **Email marketing and CRM.** Rebuilt the Galaxy Salesforce Marketing Cloud feed (580K people) and recovered 2,384 missed unsubscribes. Restored the Dynamics CRM sync (8M-row recovery) and built a web-form-to-Dynamics service (Azure Functions, Logic Apps) that creates leads and alerts reps in Teams.
- **Reliability and cost.** Ticketing (AXS) now runs when source data lands, not on a fixed clock; jobs had started early on 30 of 34 days. Retired failing legacy pipelines, saving ∼$31K/yr.
- **Docs and AI workflow.** Started the team's docs site (MkDocs, Azure Static Web Apps, CI; 36 pages) so engineers and analysts can see how each pipeline works. Picked up Cursor, Claude Code and Codex as each shipped; I run parallel agents daily.

Sports Analytics 2021 – now

Bruin Tennis Consulting founder; UCLA men's tennis analytics 2021 – 2025

- Started on one shared Dartfish account with no funding or coach buy-in. Recruited and trained ∼80 students, then built our own tagging site, video-to-web pipeline and D3 match visuals (repo, 19 contributors; player review). The team reached the 2025 NCAA quarterfinals.

Stats Perform AI data scientist 2023

- Built Stats Perform's first AI tennis radio: Opta point data → GPT-4 commentary → synthetic voice (AWS Polly, Play.ht), demoed on Australian Open footage (demo). Also worked with live betting feeds.

USTA Player Development data analyst 2023 – 2024

- Coaching analyst for top US players, including Coco Gauff and Ben Shelton, at summer events and the US Open, using Hawk-Eye tracking data (ball and player position, millisecond resolution) for match prep (public-data rebuild).

Team USA Cycling data analyst, freelance 2024 – 2025

- Built Tableau dashboards from training splits that coaches used to pick sprint riders and plan training (synthetic demo).

Forward-deployed data and AI work for LA brands I like 2026

- **Toroline** (tennis strings): scraped and modeled public market data (461 retail variants, 439 lab-tested strings, 186 creator videos) into an analytics site with a Claude review workflow (demo).
- **MARKET** (Chinatown Market, streetwear, 4 people): helped set up their Claude-run reporting pipeline; Python pulls Shopify, Brandboom, Klaviyo and Instagram into DuckDB with stale-data warnings (demo).
- **Giant Robot** (art store and gallery): mapped their Instagram (44 of 52 recent posts were artist collabs); scoping AI tools for artist discovery and the ∼350 listings staff build by hand per show.

Data Python, SQL, PySpark, Databricks (Lakeflow, Unity Catalog, Genie), Delta Lake, DuckDB, Fivetran, Data Factory, Synapse
AI Claude Code, Codex, Cursor, MCP, GPT-4 API, text-to-SQL (Genie), AWS Polly **Viz** D3.js, Tableau, Power BI
Apps TypeScript, Next.js/React, Azure (Functions, Logic Apps, App Service), AWS S3, Vercel, REST APIs, webhooks, Git, CI/CD
Systems Dynamics 365, Salesforce Marketing Cloud, Shopify, Klaviyo, Azure DevOps, Jira, Confluence
Education UCLA, B.S. Data Theory, 2025 **Languages** English, Mandarin
